LAB Assignment #8, for ECE 338

Assigned Nov. 5th
Due Nov. 7th

Description: Download the HDMI driver project, synthesize and run it.

Download the tcl-based project or the Vivado project (courtesy of Charles), synthesize it and then be prepared to demo it using the monitors in 215. Charles has posted instructions on his github site if you decide to use the tcl-based project. Toggle the switches to change the color scheme on the screen.

This lab is worth 10 points and requires a quick hardware demo.
